Revision History	2

1. Purpose

This handbook describes how the Engineering department at Sogno Enterprise works: culture, structure, and shared expectations across the SentinellQ, EnterpriseAI, and VaultLayer teams.

2. Engineering Culture

Engineering values written proposals for significant decisions, small and frequent pull requests, and a blameless approach to incidents. Every engineer is expected to be able to explain the reasoning behind their code, not just what it does.

3. Team Structure

Engineering is organized into four teams: Platform Infrastructure, Security Research, Product Engineering (SentinellQ, EnterpriseAI, VaultLayer squads), and Quality Assurance. Each team has a lead who reports to the VP of Engineering.

4. Responsibilities

- **Platform Infrastructure** — cloud infrastructure, CI/CD, internal developer tooling.
- **Security Research** — threat intelligence feeding SentinellQ, internal penetration testing.
- **Product Engineering** — feature development for the three product lines.
- **Quality Assurance** — test strategy, release sign-off, regression suites.

5. Code Quality

All code changes require at least one peer review approval before merging. Test coverage on new code should not fall below 80% for backend services. See Software Development Guidelines (SGN-ENG-02) for detail.

6. Documentation

Every service must have an up-to-date README covering purpose, setup, and ownership. See Technical Documentation Standards (SGN-ENG-05).

7. Collaboration

Each squad runs a daily 15-minute stand-up and a bi-weekly planning session. Cross-team dependencies are tracked in the shared engineering roadmap, reviewed monthly by the VP of Engineering.

Revision History

Version	Date	Author	Summary of Changes
1.0	01 Jan 2020	Y. Boumediene	Initial release.
2.0	01 Sep 2023	Y. Boumediene	Reorganized into four teams; added QA as standalone function.
3.0	01 Mar 2026	Y. Boumediene	Updated for Oran hub team distribution.
