5 Escalation	2
6 Communication	2
7 Post-Incident Review	2
Revision History	2

1. Purpose

This procedure describes how Engineering classifies, responds to, and reviews production incidents.

2. Incident Severity

- **SEV-1 (Critical)** — full product outage or customer data exposure. Page on-call immediately.
- **SEV-2 (High)** — major feature unavailable or significant performance degradation.
- **SEV-3 (Medium)** — minor feature impact, workaround available.
- **SEV-4 (Low)** — cosmetic or negligible customer impact.

3. Incident Reporting

Incidents are declared in #incidents using the /incident Slack command, which pages the on-call engineer and creates a dedicated incident channel automatically.

4. Responsibilities

The on-call engineer acts as Incident Commander until relieved. The Incident Commander owns communication, coordinates responders, and makes rollback/mitigation decisions.

5. Escalation

SEV-1 incidents are escalated to the VP of Engineering within 15 minutes and to the CTO within 30 minutes if unresolved. SEV-1/SEV-2 incidents affecting customer data additionally trigger the Security Incident Response Guide (SGN-IT-05).

6. Communication

Customer-facing status updates for SEV-1/SEV-2 incidents are published on the status page within 30 minutes of declaration and updated at least hourly until resolution, coordinated with Customer Support (SGN-CUST-01).

7. Post-Incident Review

Every SEV-1 and SEV-2 incident receives a blameless post-incident review within 5 working days, with root cause, timeline, and follow-up actions tracked to completion.

Revision History

Version	Date	Author	Summary of Changes
1.0	01 Jun 2020	Y. Boumediene	Initial release.
2.0	01 Mar 2026	Y. Boumediene	Introduced 4-tier SEV classification and status-page SLA.
