1. Purpose

This document sets coding, review, and testing standards for all software built at Sogno Enterprise.

2. Coding Standards

Each primary language (Python, TypeScript, Go) has a linter and formatter enforced in CI; unformatted code fails the build. Style guides are maintained in the `engineering-standards` repository.

3. Branching

Sogno Enterprise uses trunk-based development with short-lived feature branches (target lifetime under 3 days). Direct commits to `main` are disabled; all changes go through a pull request.

4. Pull Requests

Pull requests should be small enough to review in under 30 minutes. Each PR requires: a clear description, linked ticket, passing CI, and at least one approval (two for changes touching authentication, billing, or customer data).

5. Code Reviews

Reviewers are expected to respond within 1 business day. Review comments should be specific and actionable; blocking comments must include a suggested resolution.

6. Testing

- Unit tests required for all new business logic; minimum 80% coverage on backend services.
- Integration tests required for any change touching a public API contract.
- No merge to `main` with a failing or skipped test in CI.

7. Documentation

Any change to a public API or service behavior must update the corresponding documentation in the same pull request, per Technical Documentation Standards (SGN-ENG-05).

8. Development Environments

Local development uses containerized environments defined in each repository's `docker-compose.yml`, kept in sync with staging configuration to minimize environment drift.

Revision History

Version	Date	Author	Summary of Changes
1.0	01 Jan 2020	Y. Boumediene	Initial release.
2.0	01 Apr 2023	Y. Boumediene	Moved to trunk-based development from Git Flow.
2.5	01 Mar 2026	Y. Boumediene	Raised backend coverage minimum to 80%.
