1. Purpose

This document sets the standard for technical documentation across Sogno Enterprise's engineering organization.

2. Documentation Requirements

Every service, library, and internal tool must have documentation covering purpose, ownership, setup instructions, and how to get help. Documentation is reviewed as part of the pull request that introduces or changes the relevant behavior.

3. API Documentation

All public and internal APIs are documented using OpenAPI 3.0 specifications, generated as part of the CI pipeline so documentation cannot drift from the implemented contract.

4. Architecture Documentation

Each product line maintains a living architecture diagram and a decision log (ADR — Architecture Decision Record) for significant design choices, stored alongside the code in a `/docs/adr` directory.

5. Naming Conventions

Services are named `<product>-<function>` (e.g., `sentinelhq-ingest`); documentation files use lowercase-hyphenated names matching the service name.

6. Versioning

Public APIs follow semantic versioning. Breaking changes require a new major version and a minimum 90-day deprecation window for the previous version, communicated to affected customers.

7. Maintenance

Each document has a named owner (typically the service's tech lead) responsible for keeping it current. Documentation older than 6 months without review is flagged automatically for the owner to confirm or update.

Revision History

Version	Date	Author	Summary of Changes
1.0	01 Sep 2021	Y. Boumediene	Initial release.
1.4	01 Mar 2026	Y. Boumediene	Added automated staleness flagging for documents older than 6 months.
